water ■ fire ■ mold

R E S T O R A T I O N

water & flood

Water damage can come from many sources. Whether it's a toilet overflow, a failed water heater, or a storm, water can cause significant damage to homes and businesses alike. Removing the water as soon as possible is the most effective way to minimize damage. Mold can start to grow 24-48 hours after becoming damp, so immediate moisture removal is critical. Our IICRC certified technicians will use specially designed, highly efficient equipment to dry affected areas and materials quickly and effectively. Once dry, we will restore your property to pre-loss condition.

property clean-up

Our property clean-up services include sewage clean-up, hoarding clean-up, vandalism, broken glass, emergency board-ups, crawl space encapsulation and pack-out service. We can also provide cleaning and restoration of possessions such as clothes, linens, curtains/drapes, books, electronics, and documents. Our professionals will conscientiously ensure that your property is fully restored and all health and safety concerns are eliminated.

trauma / bio-cleaning

Traumatic events such as a crime occurrence or unattended death can be overwhelming for everyone involved. We understand how difficult this is and will deliver compassionate assistance in restoring order to your home or business. Trauma/ bio-hazard cleanup should not be attempted by anyone who is not specifically trained for forensic cleaning. You can be confident that any area we've cleaned is free from biohazardous material and safe to use.

mold remediation

Mold can pose a serious health hazard and remediation requires a thorough understanding of the risks involved, making it important to have removal performed by trained and licensed professionals that understand the proper safety procedures. Effective mold removal starts with moisture mitigation, first determining moisture levels, then drying with dehumidifiers and air movers with HEPA filters. Once dry, our team removes the mold spores and disinfects the surfaces to prevent future mold growth.

fire restoration

Fire damage is devastating in so many ways. Our professional fire damage restorers are available 24/7/365 and will be there quickly to secure the property, boarding up any doors and windows and tarping any roof openings, including those created by emergency personnel. Our team will remove all debris, clean-up water, disinfect and deodorize, and rebuild the damaged structure quickly and professionally, working with your insurance adjuster to restore your home or business.

asbestos abatement

Asbestos is a known carcinogen and can be found in many different building materials including vinyl floor tile/mastic, pipe insulation, drywall compound, and popcorn ceilings, to name a few. If independent testing confirms the presence of asbestos, our certified professionals will create the proper containment and remove all hazardous materials per environmental regulations. Third party clearance testing will then ensure that the space is safe to reoccupy.
